skate-park

inline - skateboard - bmx

skate technology

A - steel construction

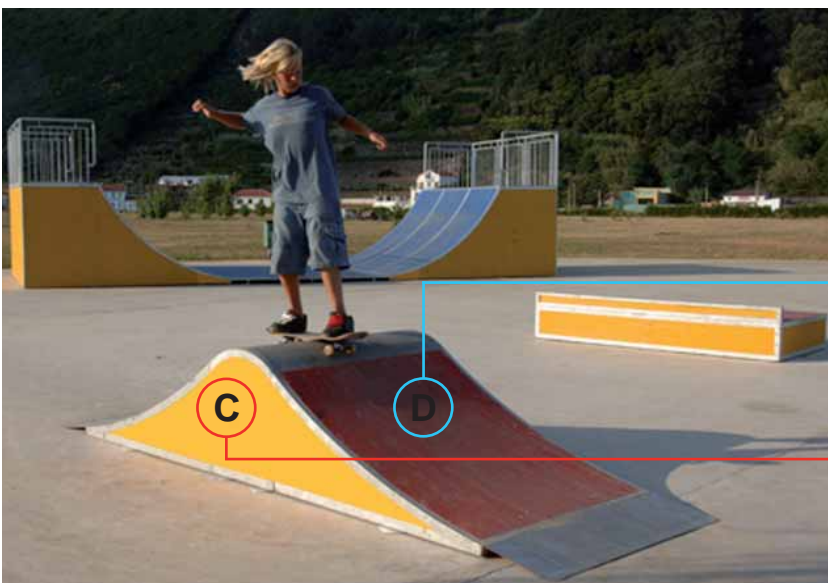

Hot-dip galvanized steel tube construction manufactured in a modular system allowing for easy modification and expansion.

B - safety railing

„free grind“ safety railings.

E - approaching plates

3mm pre-formed stainless steel plates.

skating surface

D - GRP

10mm reinforced fibreglass boards in all RAL colours
double noise protection layer with vibration absorber

C - site skirts

8mm reinforced fibreglass boards in all RAL colours

Only high-quality and highly resistant materials are used in the production of our skate park equipment. No compromise is made, ensuring long-lasting and safe use.

Skate park planning

70 million skateboarders, inliners and BMX riders in Europe have converted a vogue into a mainstream sport.

We can plan your skate park using the latest computer technologies backed by years of experience and personal consultation.

Our skate parks are built and tested to the latest requirements of the EN14974 safety standards for skate equipment.

Models

Obstacles

such as rails and curbs are very popular training ramps copied from street obstacles. They are particularly suitable for grinding and ollies and are a standard feature.

Fun-Box

One of the most important aspects of a skate-facility, the various Fun-Boxes create and define the core of a good skate park.

Ramp`s

Generally positioned towards the exterior to produce the necessary speed for obstacles or fun boxes. Banks and quarters are also used for simple tricks.

Half-Pipes

We can offer the right half-pipes for competition or training purpose, or just for fun. New designs trends and combinations with "street" elements have been developed.

Excellent solutions are available even for small spaces.
